

SkillGap

Adaptive assessment feedback for institutions

SkillGap is an AI-powered assessment platform that shows students and institutions exactly where learning breaks down. Every time a student completes an assessment, SkillGap generates a personalized diagnostic for the student and class-level gap intelligence for faculty, automatically, with no extra staff hours and no turnaround time.

The problem it solves

- Students get grades but rarely know what to actually fix, so they disengage.
- Faculty spend hundreds of hours a year on repetitive diagnostic feedback.
- Institutions struggle to produce learning-outcomes evidence for accreditation.

How it works

SkillGap layers on top of the systems you already use (Moodle, Canvas, Google Classroom, or any platform via API), or we build a tailored version from scratch. A typical onboarding:

- **Audit:** we map what SkillGap needs from your current system. No changes required.
- **Connect or build:** integrate on top of your LMS, or build a custom version. Scoped and priced upfront.
- **Pilot:** run one full assessment cycle with a single class, at low risk.
- **Go live:** review results together, then scale across subjects and cohorts at your pace.

What faculty and students get

- **Students:** a clear, personalized breakdown of where they fell short and what to study next.
- **Faculty:** class-level gap intelligence showing which topics the whole cohort missed.
- Faculty keep full control. The AI does the diagnostic legwork; every result is reviewable and clearly labeled as machine-generated.

Engagement options

System Integration Connect SkillGap to your existing LMS or assessment platform via API. Your workflows stay as they are; we add the scoring and AI feedback on top.

Custom Build A version built entirely for your institution: your subjects, question bank, and branding. Scoped and fixed-price before any code is written.

Pricing, in brief

- Credit-based: one credit = one AI feedback generation. Budget, Standard, and Premium tiers.
- Setup ranges from \$0 for self-serve integrations up to scoped custom builds.
- Bring your own AI key (BYOK) available for institutions with existing AI contracts.

- Credits valid for 12 months. A 500-student school running selective feedback runs roughly \$2,100/year.

Founding partner offer

We're onboarding a small group of founding-partner institutions:

- **50% off your pilot** (one class, one subject) to prove the value first.
- A direct say in the product roadmap and feature priorities.
- Founding pricing held for your first two years if you convert from the pilot.
